UI Screenshots Package

CircuGrid Brief · all figures are live values from the running application

Section	Screens
A. Telemetry dashboard	5
B. Circular waste allocations	3
C. Facility alerts	1
D. Forecasting and resilience	3
E. Landing page	5

Screens are captured from the running app with a Chrome DevTools script (tools/shoot.mjs). Dashboard, waste-allocation and alert views are grouped as requested.

A. Telemetry dashboard

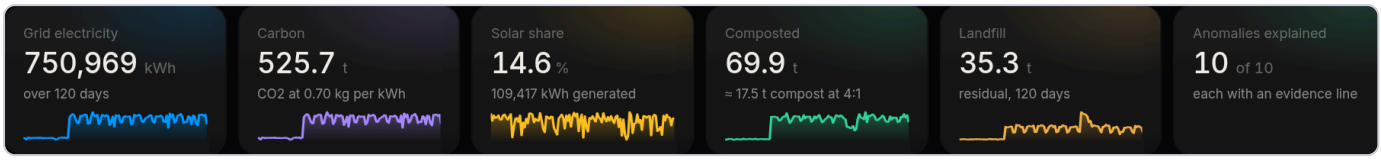

Fig. 1 — Live KPIs with sparklines: grid electricity, carbon, solar share, composted, landfill, anomalies explained.

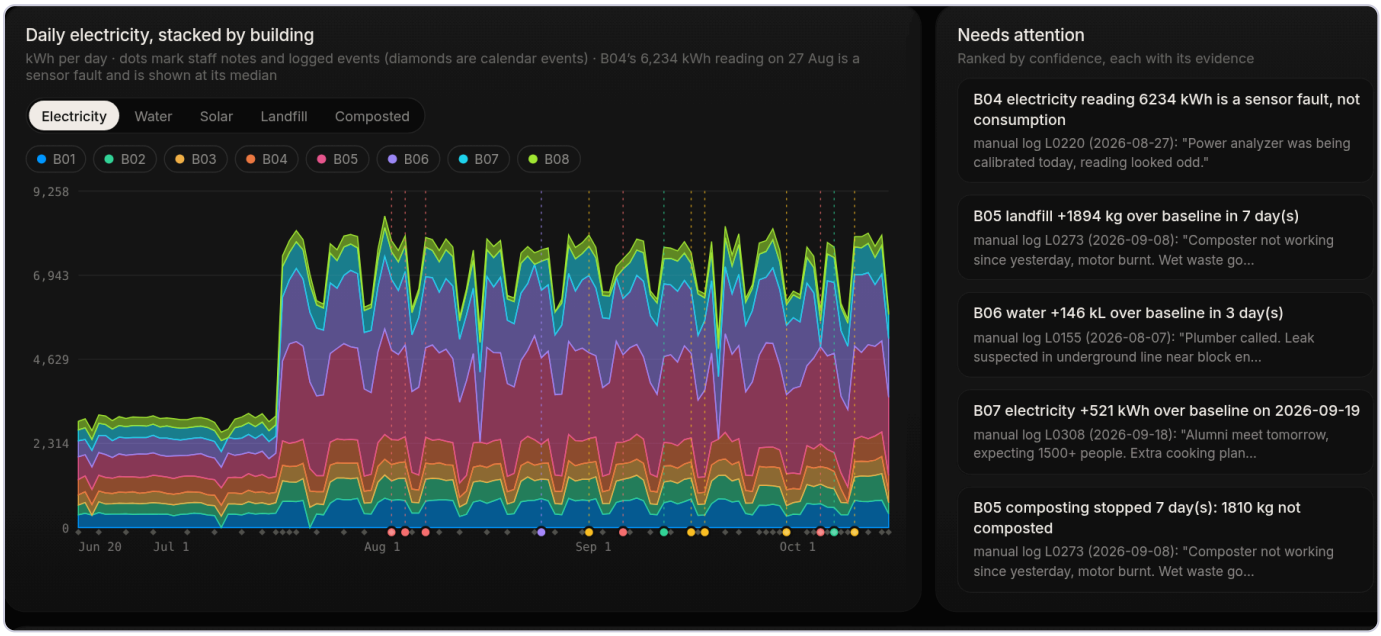

Fig. 2 — Daily telemetry stacked by building with staff-note and calendar-event pins, beside the ranked "Needs attention" alerts.

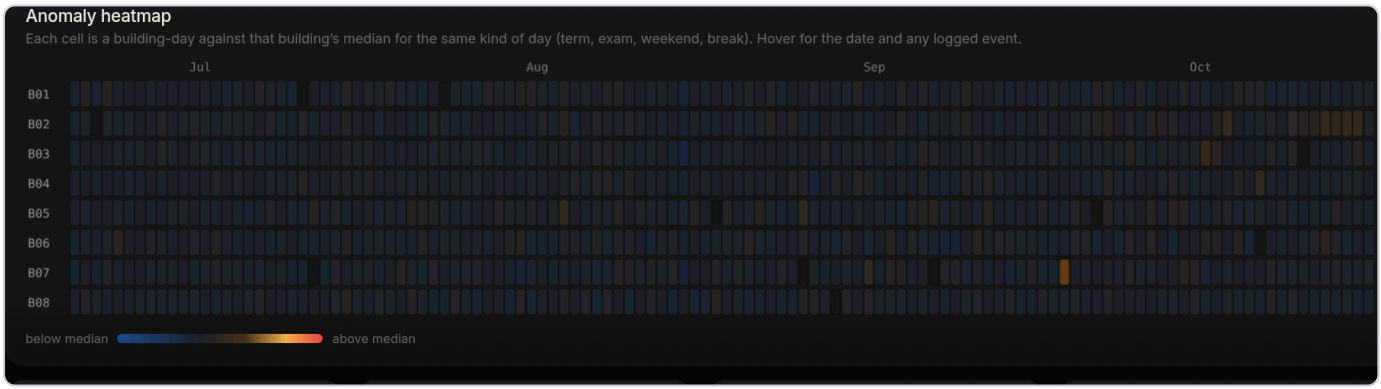

Fig. 3 — Building-by-day anomaly heatmap, normalised by day type, so faults stand out from term/break shifts.

Fig. 4 — Eight building cards: share of grid electricity, solar and composter badges, flag counts.

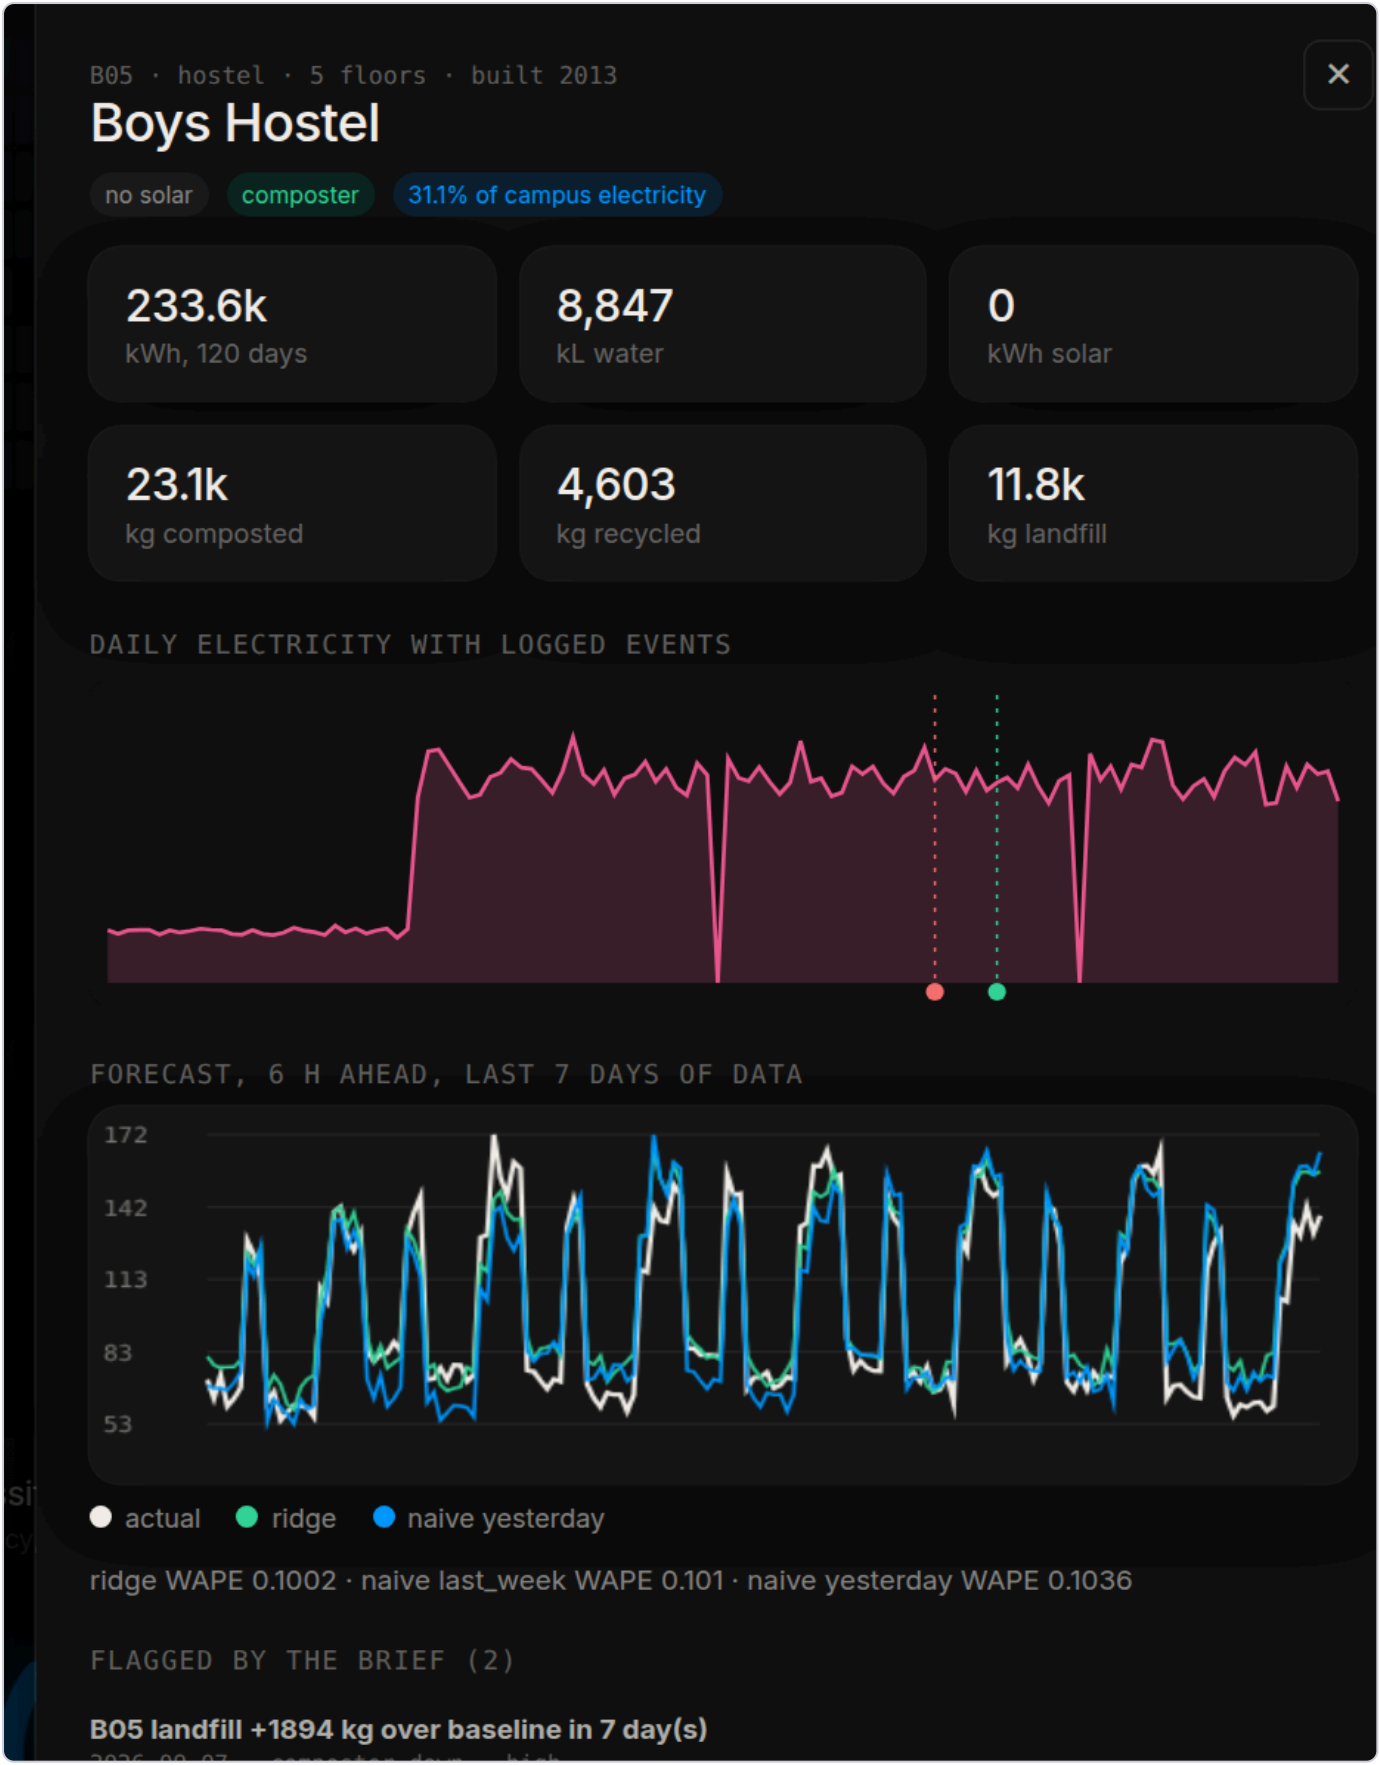

Fig. 5.1 — Per-building drawer: KPIs, electricity with notes pinned, live 6 h forecast, flags and notes.

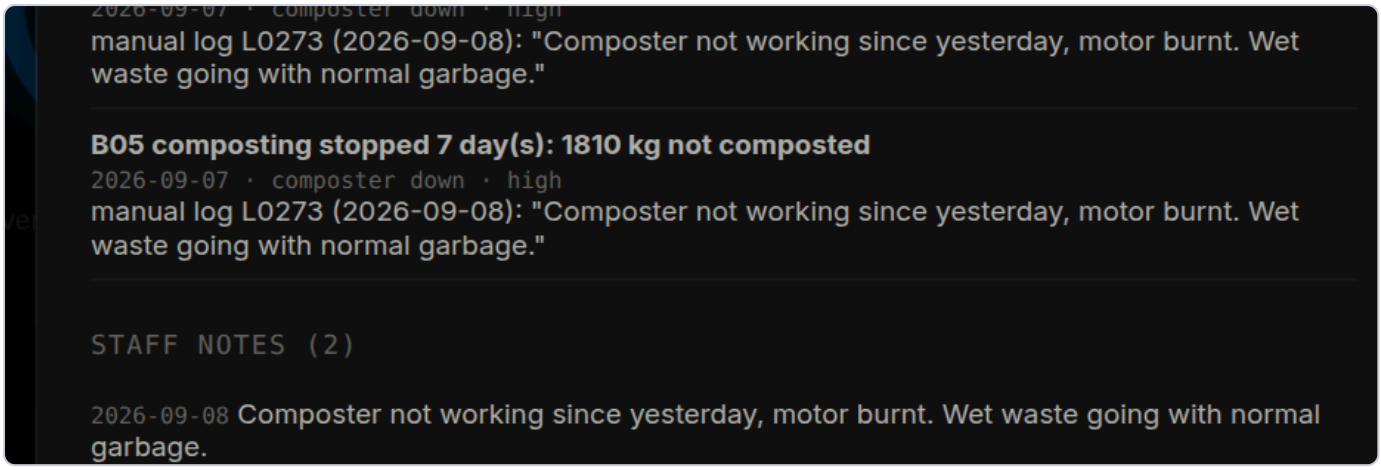

Fig. 5.2 — Per-building drawer: KPIs, electricity with notes pinned, live 6 h forecast, flags and notes. (continued)

B. Circular waste allocations

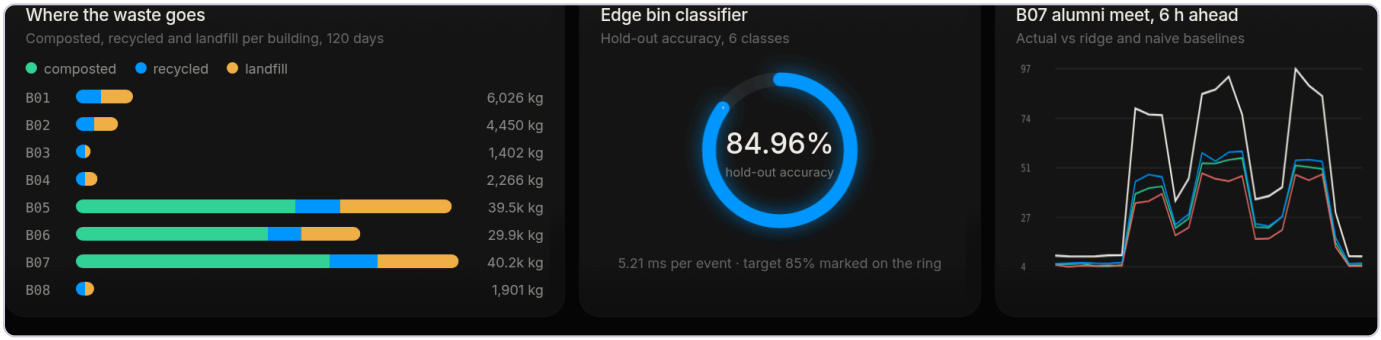

Fig. 6 — Composted vs recycled vs landfill per building, the edge classifier accuracy ring, and the B07 forecast.

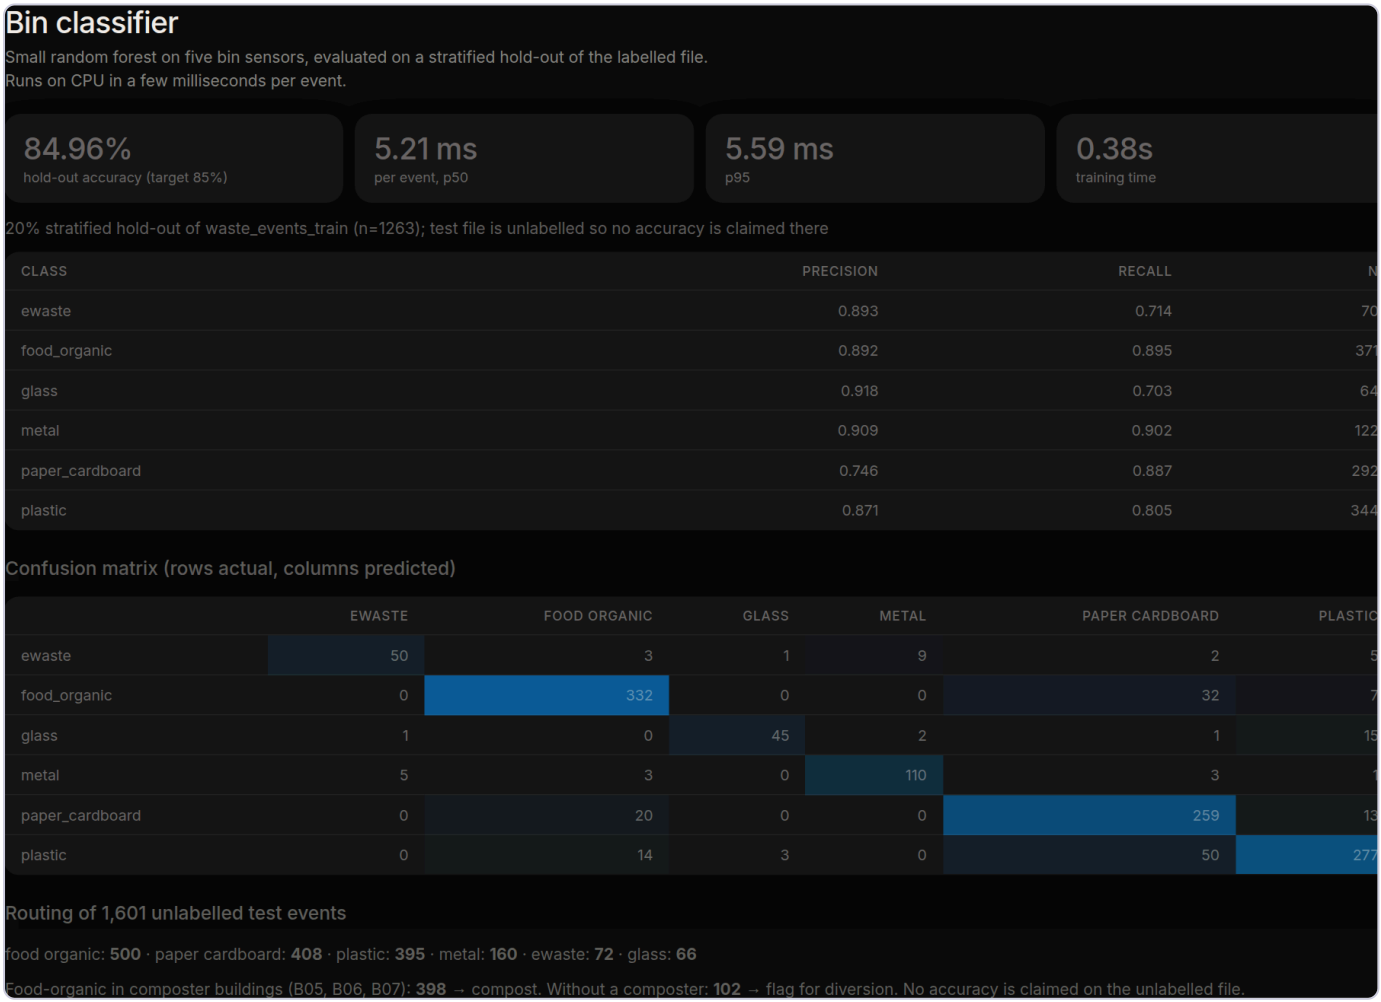

Fig. 7 — Bin classifier: hold-out accuracy, latency, confusion matrix, and routing of food waste to composter buildings.

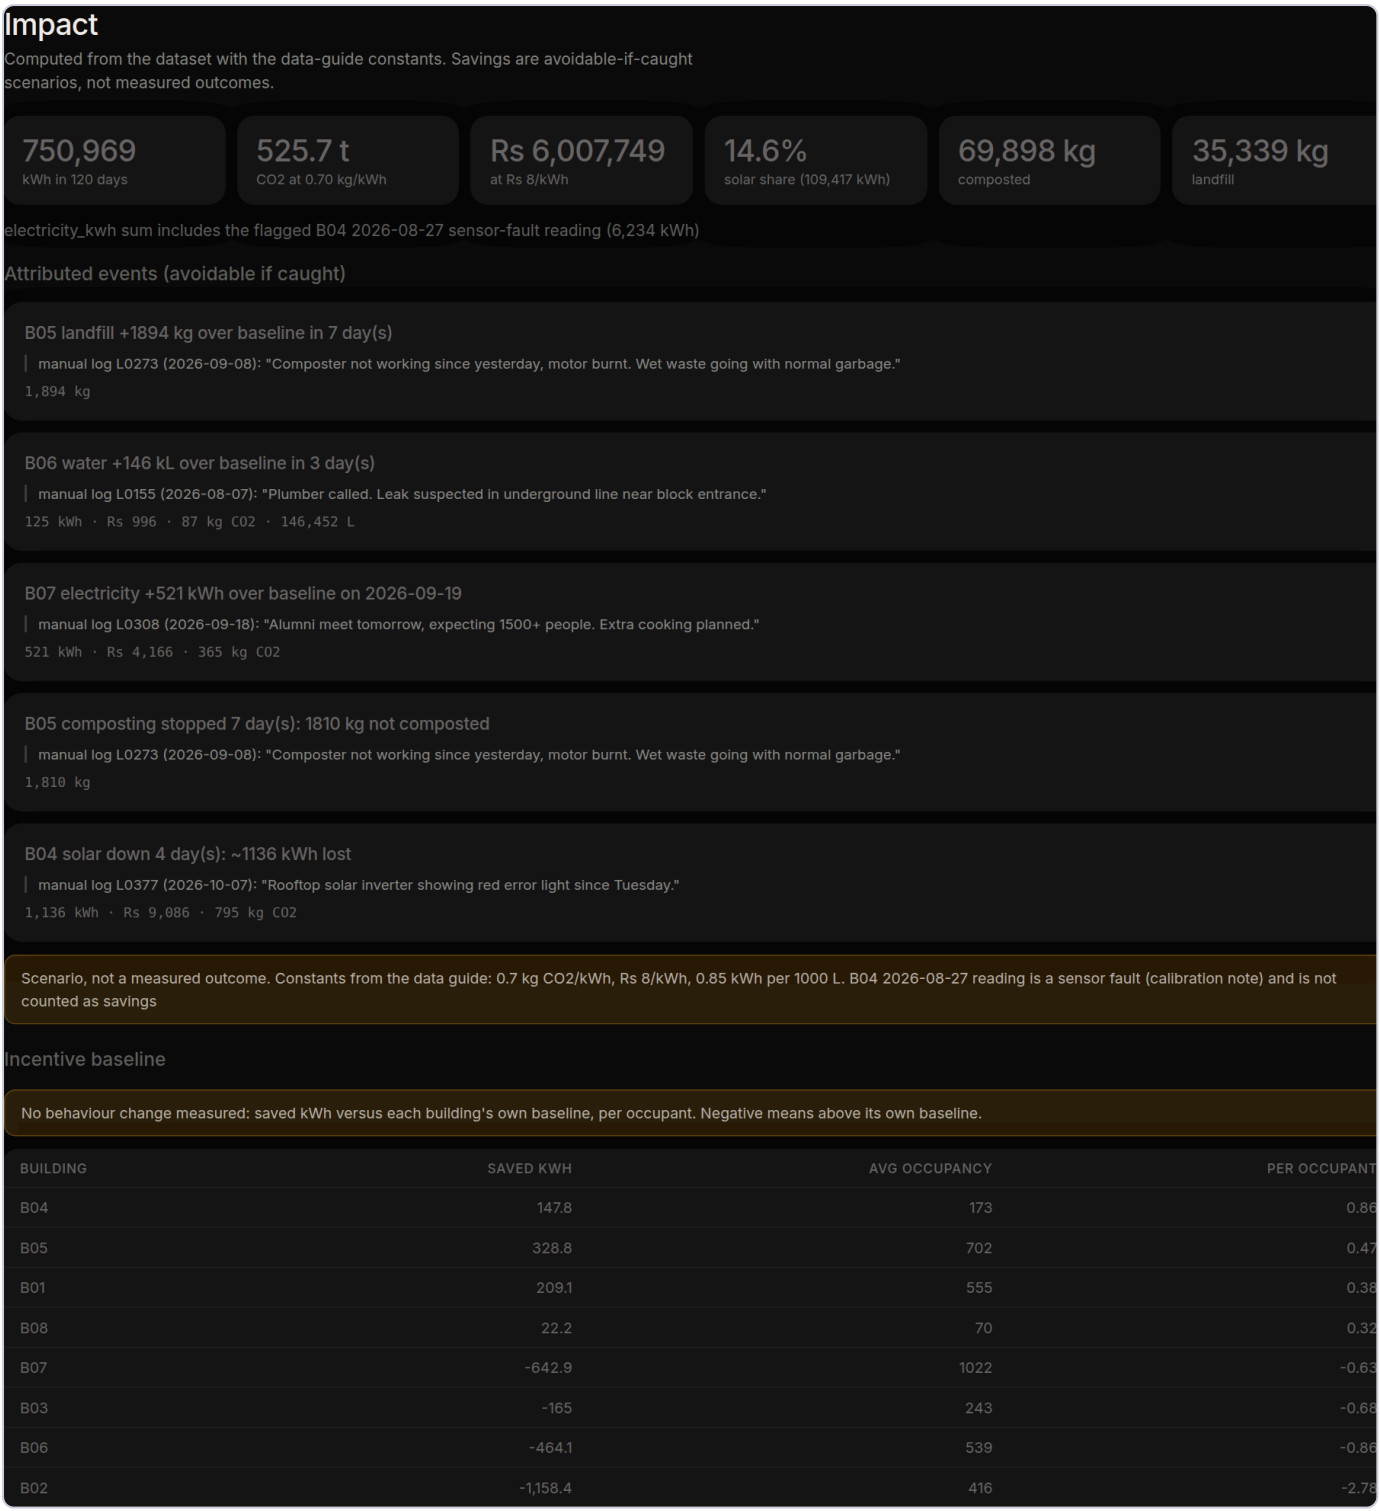

Fig. 8 — Impact view: kWh, carbon, rupees, composted and landfill mass, attributed events, assumptions, incentive baseline.

C. Facility alerts

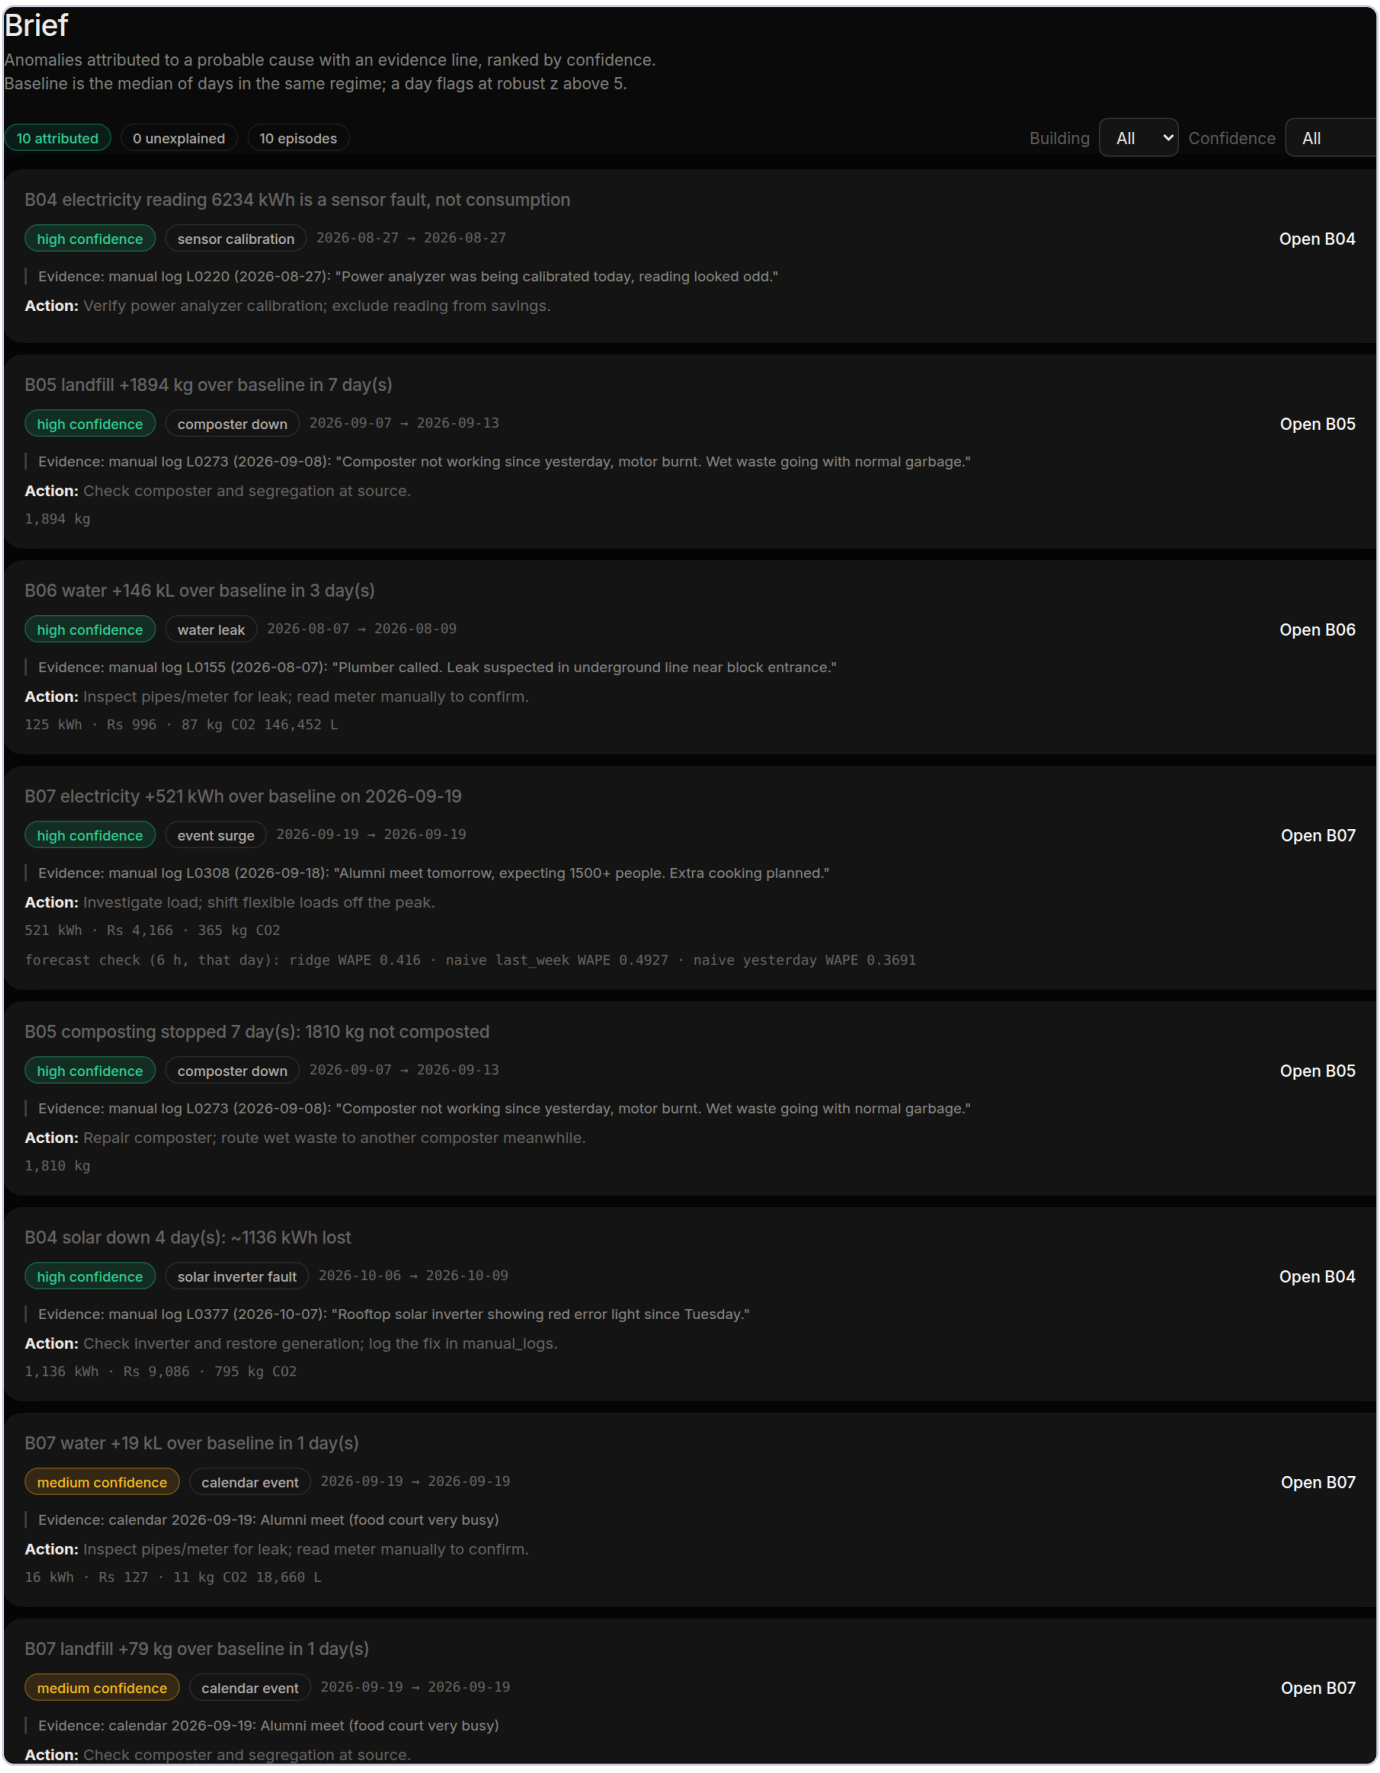

Fig. 9.1 — The Brief: each alert has a cause, an evidence line from the staff log or calendar, a confidence and a ranked action.

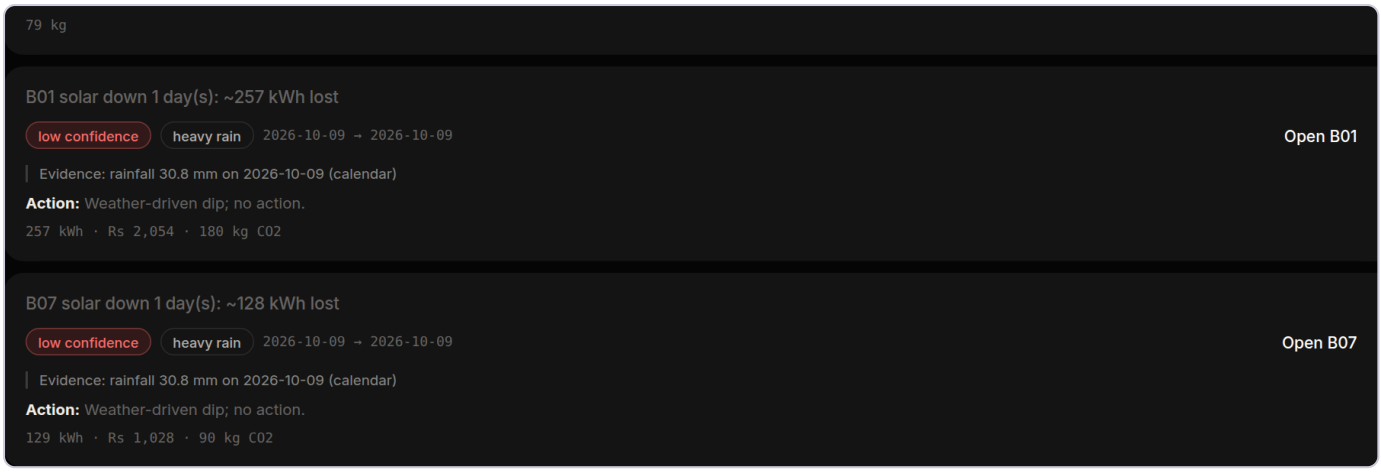

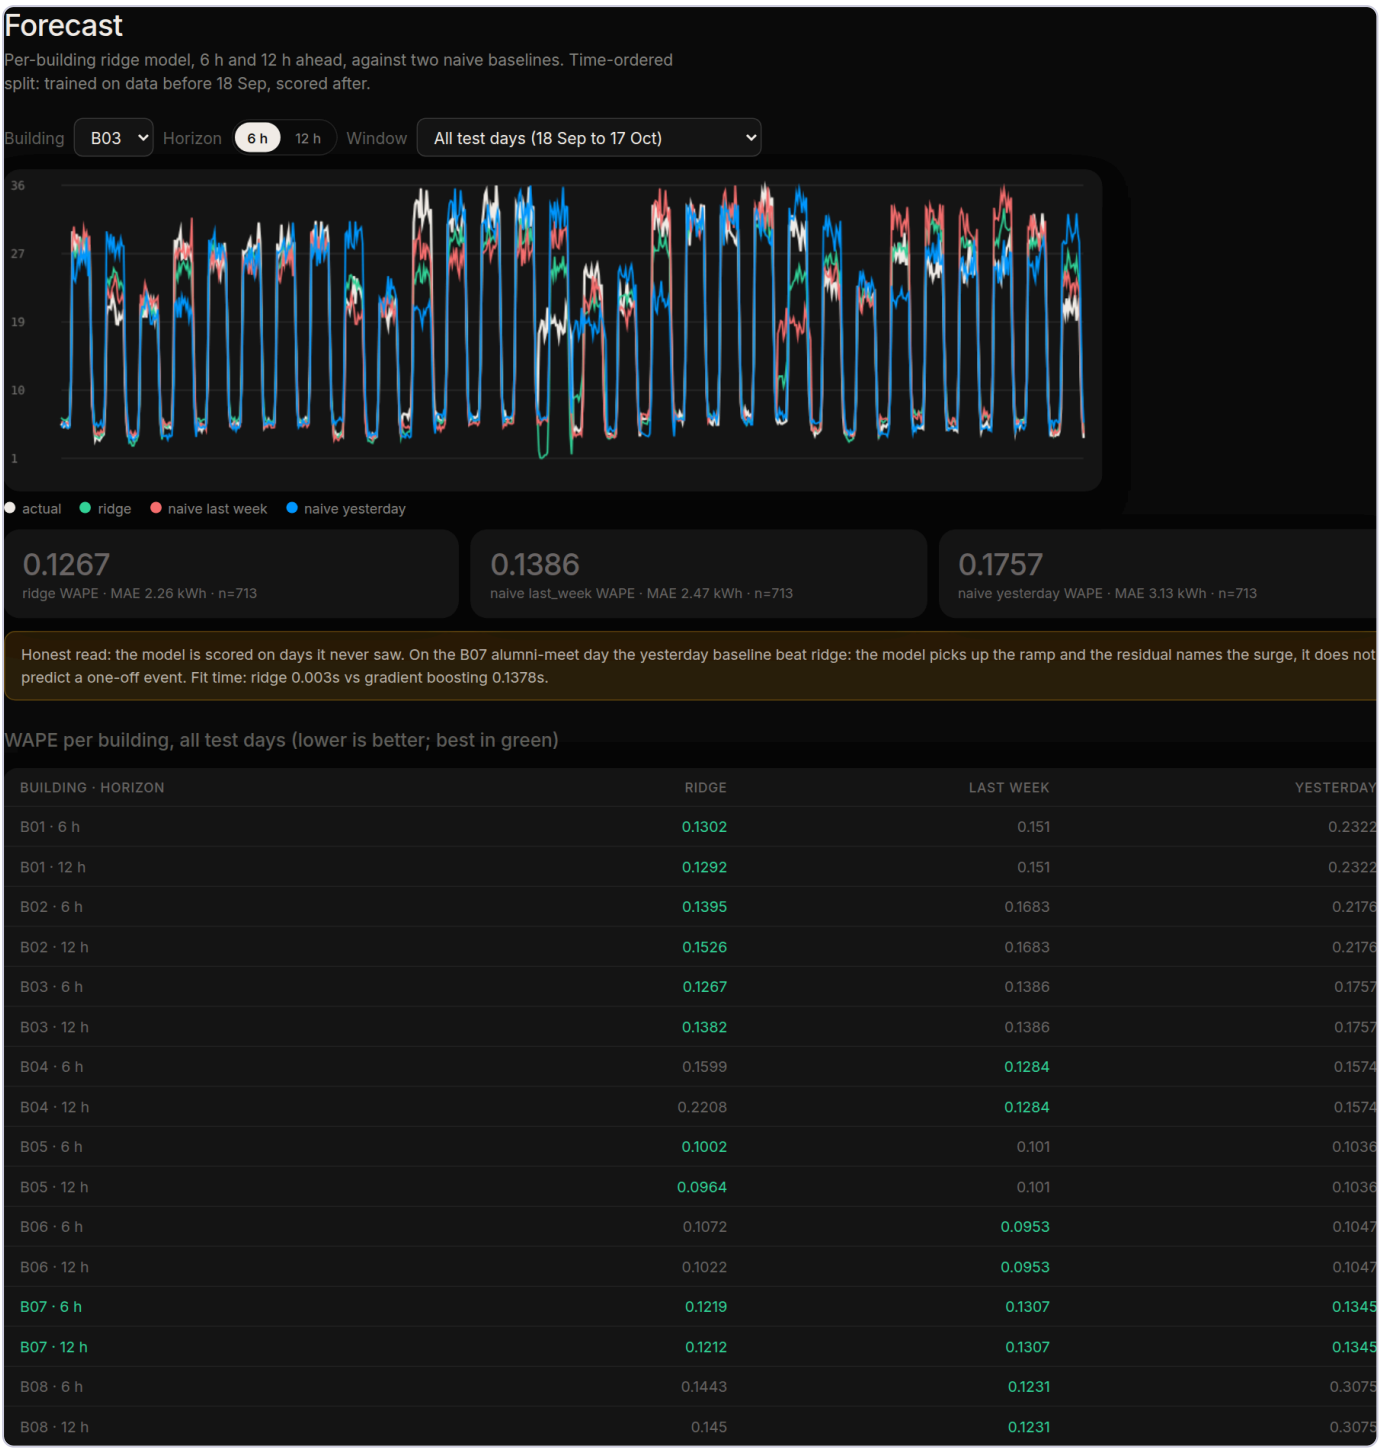

Fig. 9.2 — The Brief: each alert has a cause, an evidence line from the staff log or calendar, a confidence and a ranked action. (continued)

D. Forecasting and resilience

BUILDING · HORIZON	RIDGE	LAST WEEK	YESTERDAY
B01 · 6 h	0.1302	0.151	0.2322
B01 · 12 h	0.1292	0.151	0.2322
B02 · 6 h	0.1395	0.1683	0.2176
B02 · 12 h	0.1526	0.1683	0.2176
B03 · 6 h	0.1267	0.1386	0.1757
B03 · 12 h	0.1382	0.1386	0.1757
B04 · 6 h	0.1599	0.1284	0.1574
B04 · 12 h	0.2208	0.1284	0.1574
B05 · 6 h	0.1002	0.101	0.1036
B05 · 12 h	0.0964	0.101	0.1036
B06 · 6 h	0.1072	0.0953	0.1047
B06 · 12 h	0.1022	0.0953	0.1047
B07 · 6 h	0.1219	0.1307	0.1345
B07 · 12 h	0.1212	0.1307	0.1345
B08 · 6 h	0.1443	0.1231	0.3075
B08 · 12 h	0.145	0.1231	0.3075

Fig. 10 — Forecast explorer: any building, 6 h or 12 h, any window; ridge vs two naive baselines.

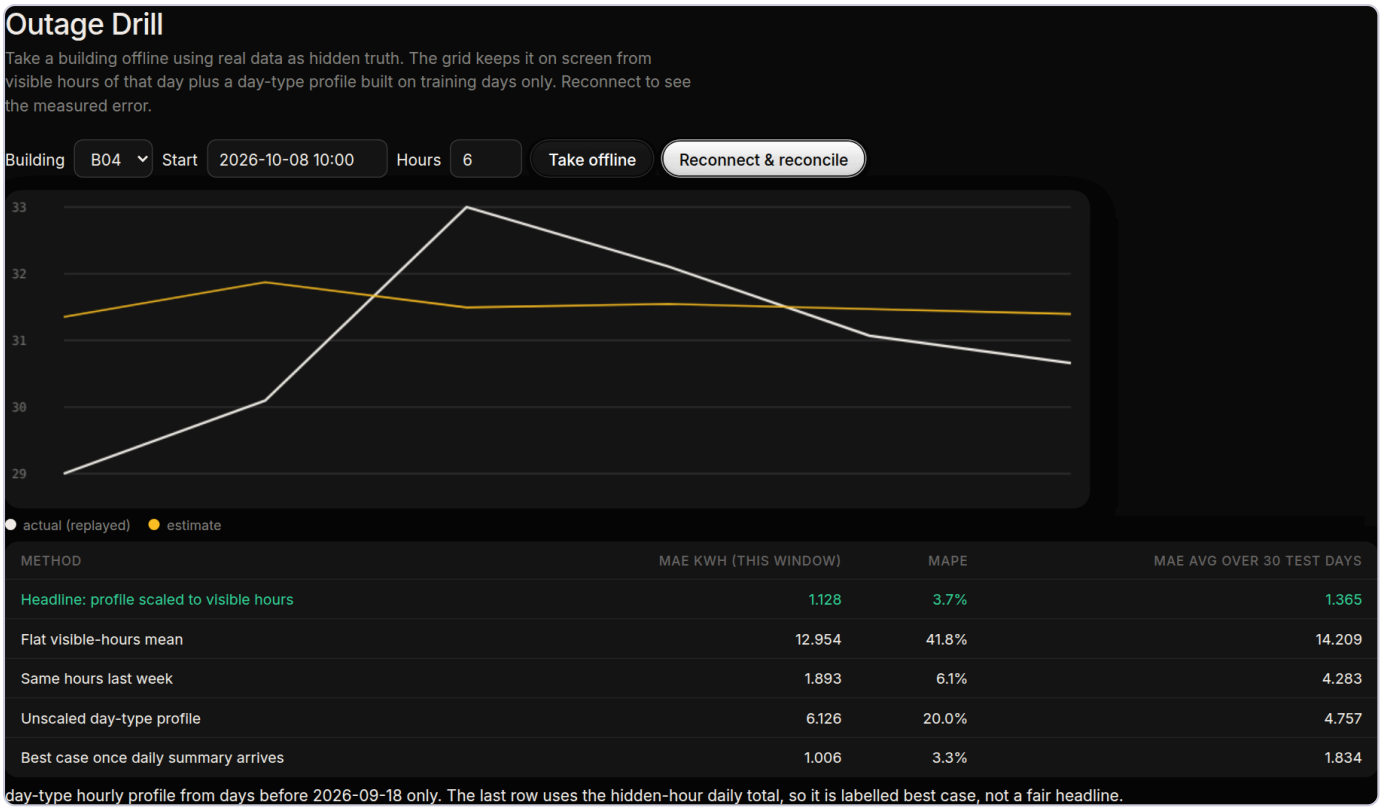

Fig. 11 — Outage Drill after reconnect: estimated vs replayed hours and the measured error against baselines.

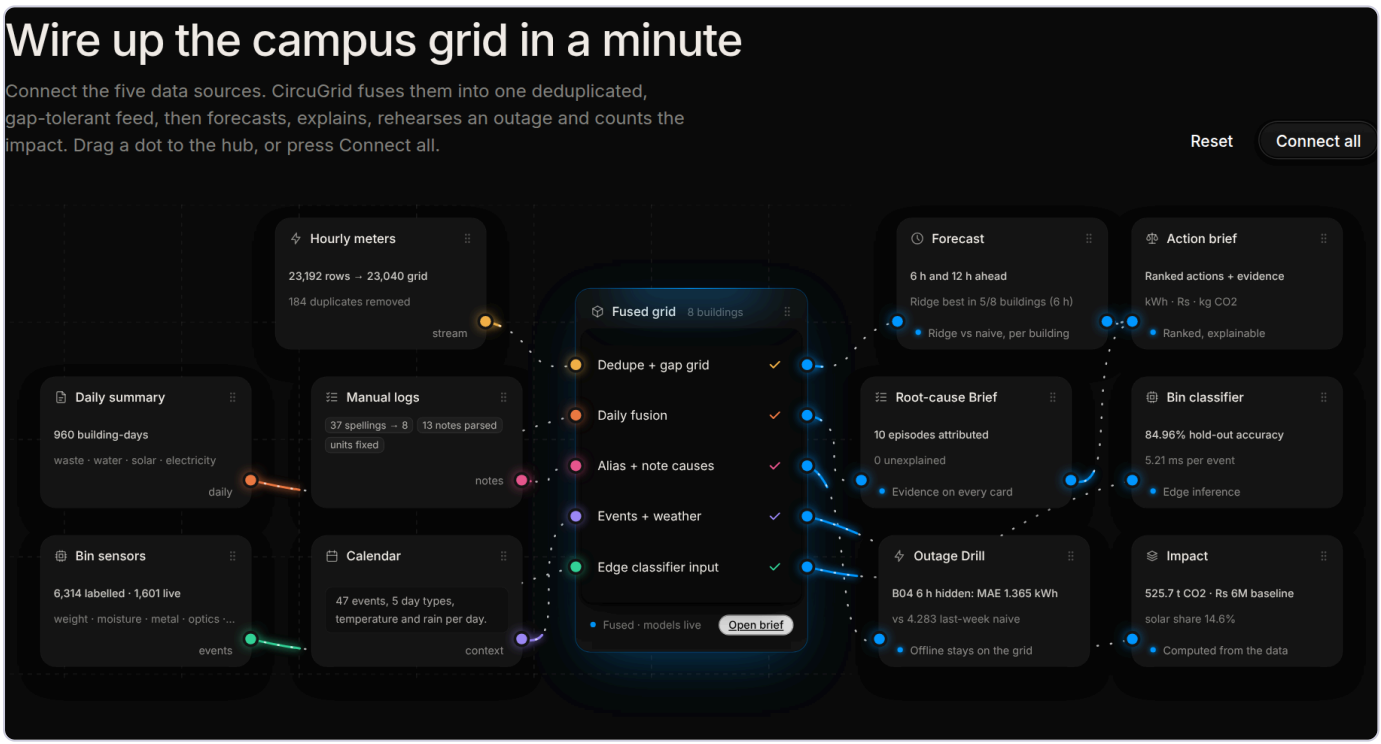

Fig. 12 — Wired grid: five sources fuse into one hub and six outputs come alive.

E. Landing page

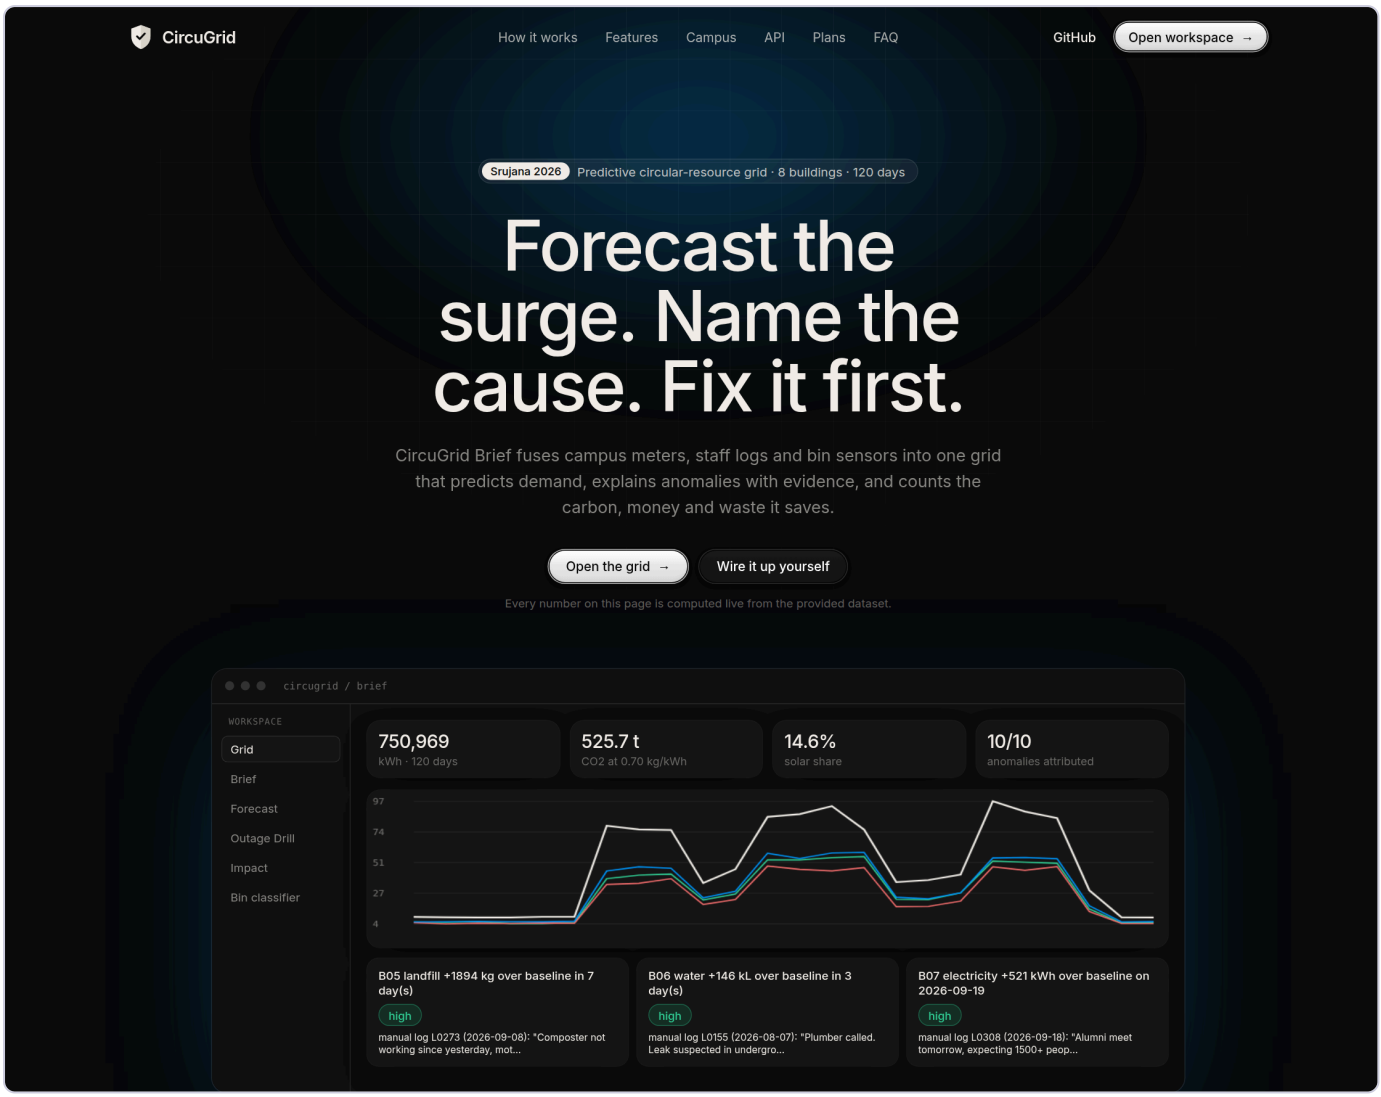

Fig. 13 — Landing page hero with a live dashboard preview.

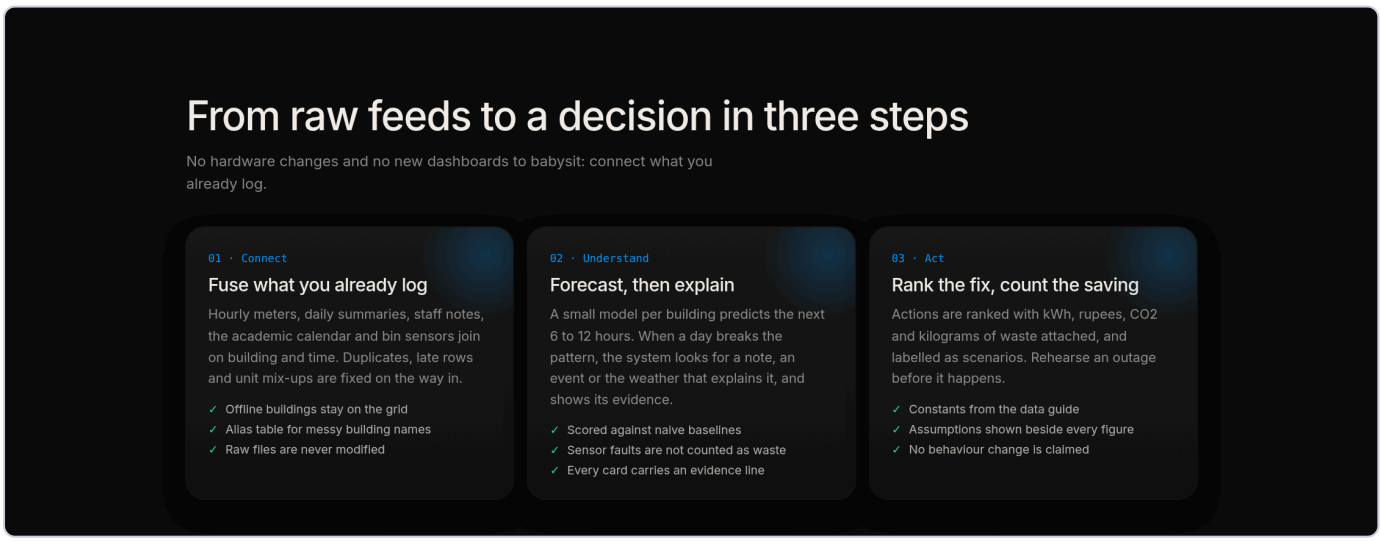

Fig. 14 — Live statistics strip and the three-step explanation.

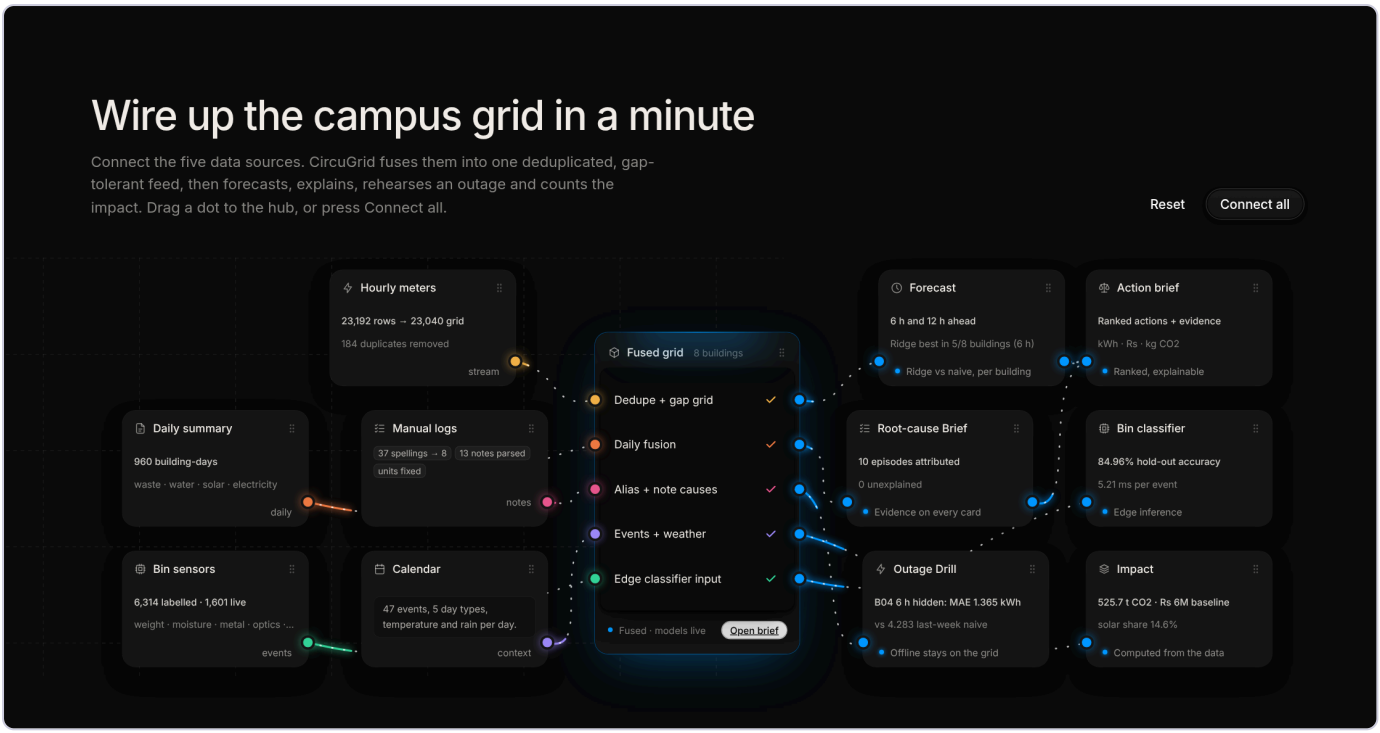

Fig. 15 — Interactive wired graph on the landing page.

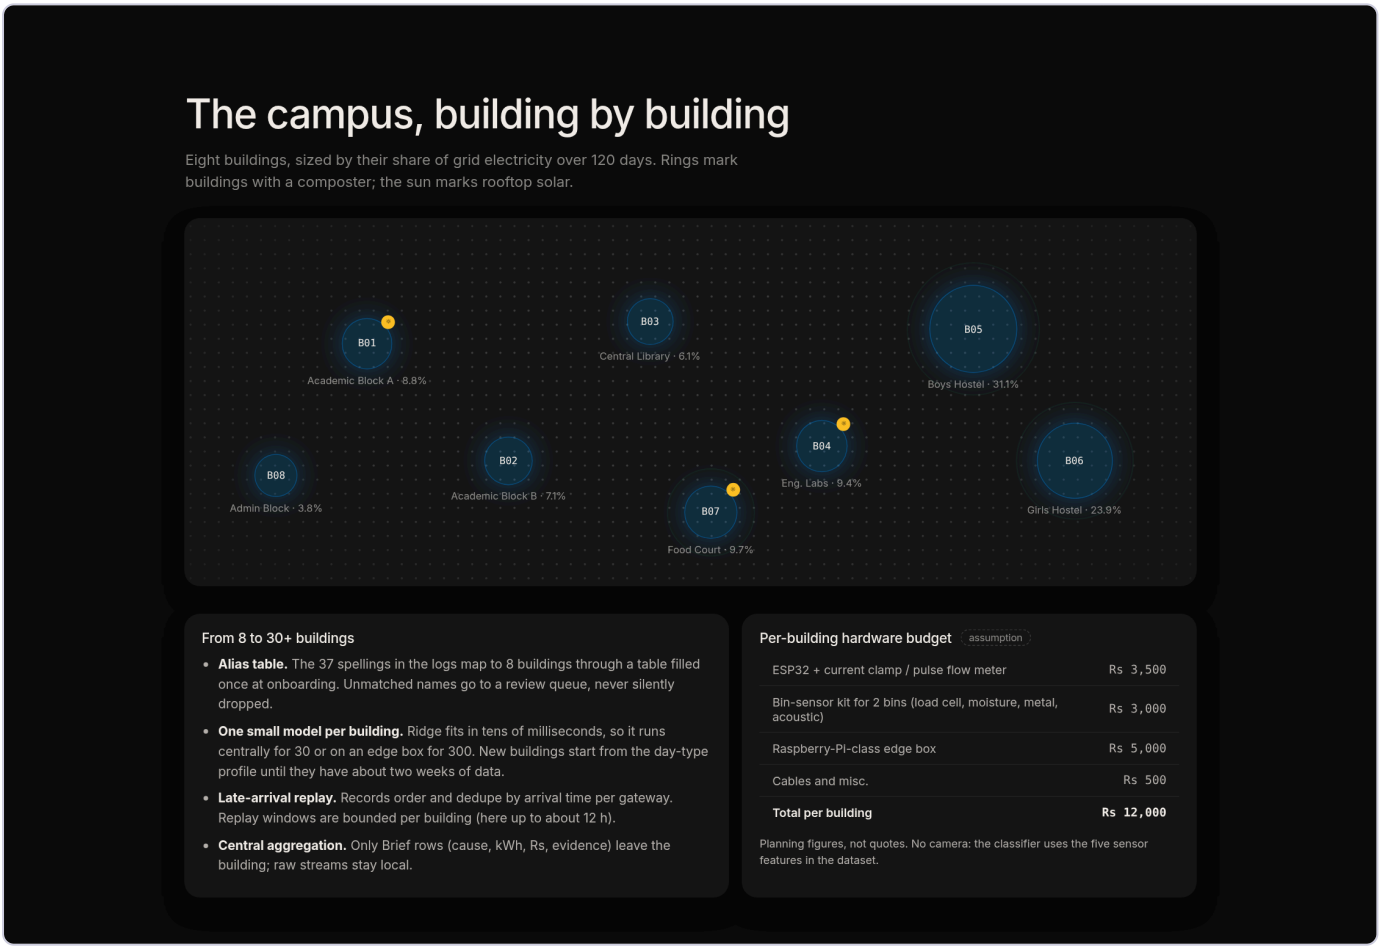

Fig. 16 — Campus map sized by electricity share, scale argument and hardware budget assumption.

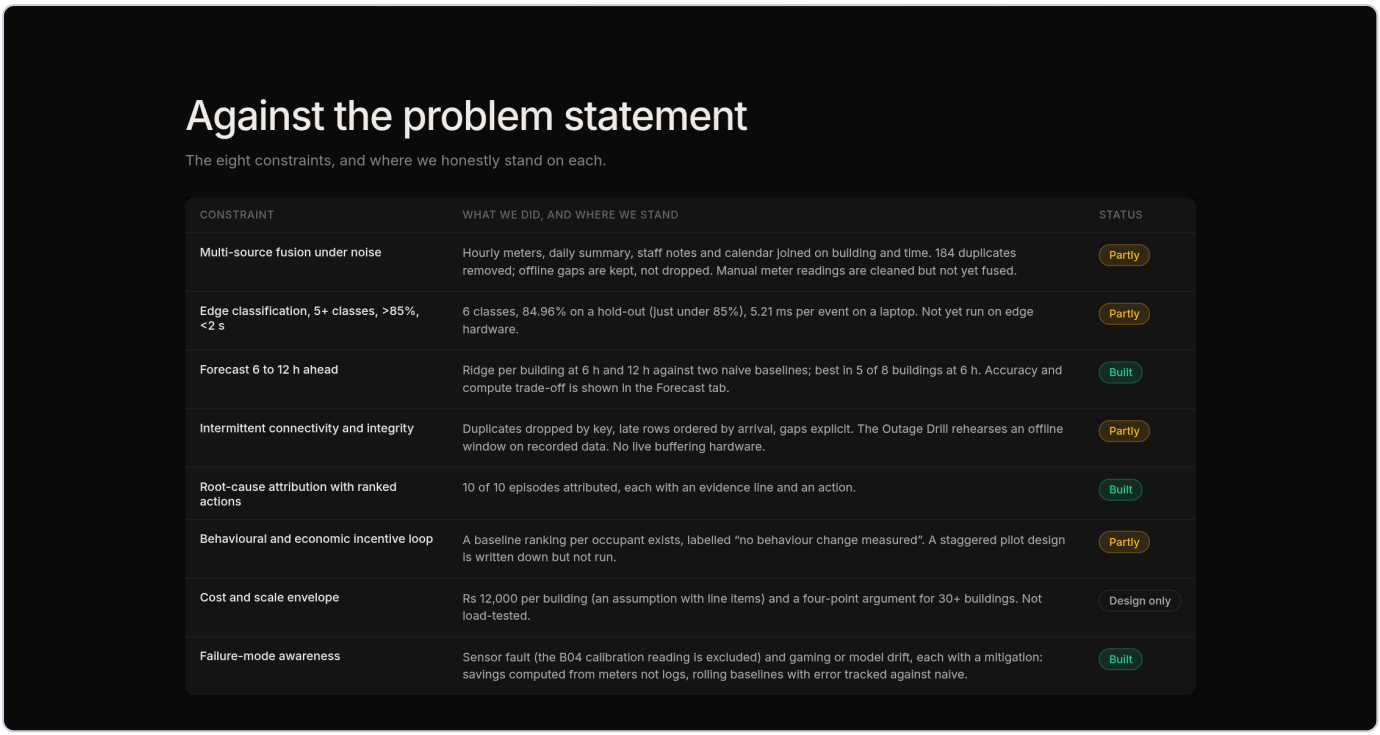

Fig. 17 — Status of each problem-statement constraint: built, partly, design only.
